/clone lib="Tg CAST Tachyzoite cDNA was sometracted by
Keliang rang, and Robert COle at Washington University.
CONA was synthesized from poly(A)+ mRNA using the
template-switching PCR method (SMART CDNA Kit, BD
Biosciences). First strand cDNA was reverse trand
synthesis was PCR amplified using the same primer set and
the fragments were digested with Sfil. The fragments were
size selected, ligated into a modified pBluescript vector
(obtained from Michael White, Montana State University)
containing directional Sfil sites, and electroporated into
ElectroTen Blue cells. Vector: Sfil sites were added to
the multiple cloning region of BBluescript SK between the
BanHI/ECORI sites. The modified polylinker has the
BanHI/ECORI sites. The modified polylinker has the
BanHI/ECORI sites. The modified polylinker has the

the fragments were digasted with Sfil. The fragments were size selected, ligated into a modified pBluescript vector (obtained from Michael White, Wontana State University) containing directional Sfil sites, and electroporated into ElectroTen Blue cells. Vector: Sfil sites were added to the multiple cloning region of pBluescript SK+ between the Bamil/EcoRI sites. The modified polylinker has the following sequence: 5'GAATTGGCCATTAGGGC (G)n-. insert-GGCGCTGGGCCACGGATCG3' where n=3-4 G nucleotides. WARNING: the library contains a small percentage of cDNAs derived from the human host cells. Library materials provided by David Sibley, Washington University."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CF370966 592 bp mRNA linear EST 27-AUG-2003

/note="Vector: Modified pBluescript (pBS SK+); Site_1:
BamH1; Site_2: ECOR1; The CDNA library was constructed by
Kaliang Tang, and Robert Cole at washington University.
CDNA was synthesized from poly(A)+ mRNA using the
template-switching PCR method (SWART CDNA Kit, BD
Biosciences): First strand cDNA was reverse transcribed
using the CDS III/3' primer and a 5' template switch
primer (Smart IV primer). The product of the first strand
synthesis was PCR amplified using the same primer set and

/note="Organ: lung; Vector: pT773D-PacI; lst strand cDNA was prepared from neuroendoocrine lung carcinoid, and was then primed with a Not I - 01490(dT) primer.

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT773 vector. Library is normalized. Library was constructed by Bento Soares and M.

//note="Vector: Modified pBluescript (DBS SK+); Site_1:
BamHi; Site_2: EcoRi; The cDNA library was constructed by
Kellang Tang, and Robert Cole at Washington University.
CDNA was synthesized from poly(A) + mRNA using the
template-switching PCR method (SMART CDNA Kit, BD
Bloscinces): First strand cDNA was reverse transcribed
using the CDS III/3' primer and a 5' template switch
primer (Smart IV primer): The product of the first strand
synthesis was PCR amplified using the same primer set and
the fragments were digested with Sfil. The fragments were
size selected, ligated into a modified pBluescript vector
(obtained from Michael White, Montana State University)
containing directional Sfil sites, and electroporated into
ElectroTen Blue cells. Vector: Sfil sites were added to
the multiple cloning region of pBluescript SK between the
BamHifcook sites: The modified polylinker has the
following sequence: 5'GAATTCGGCCATTACGGCC(G)n-. insert-
GGCCGCTCGGCCACGAGTCCA', where mail percentage of CDNAs
derived from the human host cells. Library materials

FEATURE:
NAME/KEY: CDS
LOCATION: (1)..(432)
OTHER INFORMATION: coding sequence of equine GM-CSF gene
Sequence 8, Application US/09589460
Patent No. 645740
GENERAL INFORMATION:
TITLE OF INVENTION: Equine GM-CSF
FILE REPERENCE: 454313-2334 1
CURRENT APPLICATION NUMBER: US/09/589,460
CURRENT FILING DATE: 1090-06-07
PRIOR PILING DATE: 1999-06-10
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn version 3.0
SEQ ID NO 8: SEQ ID NOS: 9
LENGTH: 435

Sequence 121, Application US/09451527

Patent No. 6482403

GENERAL INFORMATION:

APPLICANT: Sim, Gek-Kee

APPLICANT: Yang, Shumin

APPLICANT: Yang, Shumin

APPLICANT: Wonderling, Ramani S.

TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF

FILE REFERENCE: IM-2-c2

CURRENT APPLICATION NUMBER: US/09/451,527

Sequence 10, Application US/08133979A
Patent No. 5589582
GENERAL INFORMATION:
APPLICANT: Havley, Robert J.
APPLICANT: Ponath, Paul D.
APPLICANT: Rosa, Margaret D.
APPLICANT: Schacter, Bernice Z.
TITLE OF INVENTION: Enhancement of Xenograft Tolerance and Porcine Cytokines Theref
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:
ADDRESSEE: Carella, Byrne, Bain, Gilfillan, Cecchi, Stewart & Olstein
STREET: 6 Becker Farm Road
CITT: Rosaland
STATE: New Jersey
                                                                                                        ö

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5589582
GENERAL INFORMATION:
APPLICANT: Hawley, Robert J.
APPLICANT: Rosa, Margaret D.
APPLICANT: Monroy, Rodney L.
APPLICANT: Benice Z.
TITLE OF INVENTION: Enhancement of Xenograft Tolerance and Porcine Cytokines Theref
NUMBER OF SEQUENCES: 24
                                                                                                          Sequence 142, App

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                           759
